PLANNING GUIDE

Scale: 1 square = 1 metre

- STEP ONE:**
Draw your roof plan to scale including ridge, hip and valley lines (see Fig A and Fig B).
- STEP TWO:**
Establish number of downpipes required. Example: At a roof pitch of 24° one 80mm downpipe (RP80) is needed for every 92m² of roof plan area.
- | Roof Plan Area per Downpipe in m ² | Roof Plan Area per Downpipe in m ² | |
|---|---|------------|
| | HR80/RP65/MC16 | RP80/MC140 |
| 0° - 25° | 59 | 92 |
| 25° - 35° | 53 | 84 |
| 35° - 45° | 48 | 75 |
| 45° - 55° | 42 | 66 |
- STEP THREE:**
Determine the spouting profile required and use your roof plan to calculate the fittings needed.
- *Based on Average Rainfall Intensity of 150mm per hour. NOTE: When more than two angles occur in a system, the recommended roof area served by a downpipe should be reduced by 5m² for each additional spouting angle.
